

# ICD-10 Professional Services Group

## WE EASE YOUR BURDEN OF CONVERSION

Regardless of the new ICD-10 deadline for compliance, healthcare organizations are challenged with finding the right resources to make change happen. With sweeping change to their operations, documentation, workflows and technology, many are struggling to continue their daily job responsibilities while working on ICD-10.

There are great opportunities to optimize IT, HIM, clinical, and revenue cycle processes. But not having the right team to assist you can result in implementation failures, compliance issues, penalties, project delays, payment denials, and productivity declines.

It is critical to quickly identify your priorities, gaps, potential risks, and implement a well-defined ICD-10 strategy and project plan for initiation, implementation, remediation, testing, Go-live and post Go-live.

Leverage our experience combined with your internal expertise to quickly provide the support you need. We employ a straightforward methodology that can mitigate risks such as:

- ▶ Productivity declines
- ▶ Revenue cycle degradation
- ▶ Project delays
- ▶ Adoption failure
- ▶ Failure to upgrade IT application on time

“Leidos, through their consultants, presented a very well integrated approach and solution to how HHSC could mitigate the challenges presented with the transition to ICD-10.”

— **LANCE SEGAWA**  
Chief Operating Officer  
Hawaii Health Systems Corporation

## EXPERTISE

We bring many years of strategic planning, IT integration projects, operational optimization, and project management experience to healthcare organizations of all sizes, including academic and specialty hospitals, as well as physician practices. Our team can help fill the gap between your HIT vendors' ICD-10 deliverable commitments and your existing staff by developing a solution tailored to your organization.

We understand that helping a healthcare provider navigate the confusing and complex issues of ICD-10 requires detailed, specific, actionable plans, and knowledge based on real experience, not just a recommendation and a high level plan. We have consultants with certification in many IT systems and years of business operational experience. We focus on pragmatic actions because we understand the importance of federal mandates, and we know ICD-10.

## OUR STRATEGIC APPROACH

We understand how ICD-10 will impact your entire organization. We serve as strategic advisors, program and project directors at client sites across the country. Our approach will help to ensure that your technology, communication, reports, and even data analytics are included in the transition plan. Our customized approach:

- ▶ Identifies all processes and systems impacted by ICD-10
- ▶ Evaluates transition readiness and reporting readiness gaps with recommendations to close them
- ▶ Delivers analysis, schedules, estimates, etc. key to transition planning and risk mitigation
- ▶ Recommends pragmatic, actionable implementation stages and methods to achieve critical equivalence while minimizing productivity losses and reimbursement variances
- ▶ Provides ICD-10 remediation expertise and project services to maintain optimal operations throughout the transition
