

Technology Overview

HEALTHCARE INFORMATION TECHNOLOGY (HIT) SOLUTIONS can greatly improve the quality, safety, delivery and efficiency of healthcare, so organizations have spent millions of dollars on products supporting clinical transformation and other healthcare initiatives.

But organizations are now asking, "Will my network handle the increased load of a new EHR? How do I incorporate virtualization into my IT strategy? How do I know if my critical data is backed up?"

To realize its vast potential, HIT must go beyond system implementations and involve hardware, security, architecture, and virtualization. If a system is unreliable or devices are not available or appropriate to support care delivery, physician adoption will be difficult. Additionally, your IT staff may require new technology training that may not be readily accessible.

Leidos Health's technology experts can help you meet these IT transformation challenges. We use our deep knowledge to define and assess technology infrastructure, helping organizations make the right investments to meet the challenges of today and tomorrow.

WHAT WE DO

- ▶ EHR readiness assessments
- ▶ IT planning for mergers and acquisitions
- ▶ HIPAA and meaningful use risk analysis
- ▶ Back-up and recovery assessment and planning
- ▶ Infrastructure strategy and assessments
- ▶ Wired and wireless network assessment and planning
- ▶ Vendor selection, negotiation and management
- ▶ Interface strategy and development
- ▶ Technology architecture storage and performance assessments
- ▶ Project management and large scale system implementations
- ▶ Virtualization assessments
- ▶ IT staffing (including interim management placement)
