

Leidos Health Provides ICD-10 Remediation Planning Services

Leidos Health (formerly maxIT-VCS) recently had great success working with a non-profit healthcare network containing five community hospitals, three specialty hospitals, and a cancer center (about 1,800 beds and 3,000 physicians). This client recognized a need to optimize and streamline their clinical systems and EHR documentation input processes in preparation for ICD-10.

Over a 10-week period, Leidos Health identified ICD-10 remediation planning requirements and provided the client with a pragmatic strategy and comprehensive roadmap to follow to effectively remediate their EHR to ICD-10, thus minimizing negative operational or financial impacts to the organization.

Our objectives included:

- ▶ Performing a deep-dive analysis of the client's Allscripts™ Sunrise Clinical Manager (SCM) 5.5 environment, including Allscripts SCM Pharmacy, Emergency Department, Quick Registration, Admission/Discharge Diagnosis, associated ancillary applications and integration touch-points orders, order sets, charge master(s), documentation (structured input or transcribed input) and defined content.
- ▶ Evaluating more than 50,000 components within the client's Allscripts' SCM 5.5 database, including Data Dictionaries, Data Items, Charge Master Items, MLMs, Health Issues, Flowsheets, Orders and Order-Sets, Clinical Documentation Templates, and Structured Notes.
- ▶ Evaluating SCM integration components (touch points) for disparate ancillary areas including:
 - Radiology
 - Cardiology
 - Cardiac Cath
 - Endoscopy

Leidos Health provided multiple deliverables to the client, including detailed estimates of resources, level of effort and budgetary requirements to perform their Allscripts SCM ICD-10 remediation. In addition, Leidos Health provided the client with a Data Collection Tool (DCT), identifying specific clinical components within Allscripts SCM 5.5 that require ICD-10 remediation over and above their routine release implementation. Our client is now prepared to implement their Allscripts ICD-10 compliant release while concurrently performing ICD-10 remediation in highly utilized clinical impact areas.

The results will optimize and streamline clinical functionality in the new era of ICD-10, capture relevant ICD-10 data, and will help the client bridge the flow of clinical information from their EHR to their HIM coders, thus facilitating fast and accurate coding.

ABOUT US

With expertise in National Security, Health, and Engineering, Leidos will continue SAIC's proud legacy of securing the future of our families, our communities, and our world. Our diverse knowledge base and involvement in multiple disciplines and industries make us unique. We use our insights in new ways and expand our capabilities to evolve the industries we serve.
